SUMMARY

Computer Science graduate with an M.S. in Computer Science and over 4 years of experience in data science, software development, machine learning, and intelligent systems. Research experience includes cyber threat classification, anomaly detection, privacy-preserving machine learning, and resource-constrained edge computing. Strong background in Python, machine learning, deep learning, data analysis, and AI-driven security systems. Interested in applying machine learning, optimization, network security, and edge intelligence techniques to next-generation wireless and IoT systems, including 5G/6G networks.

Experience

Data Scientist, Lighthouse ERP – Nagpur, India

Oct 2025 – Jul 2026

- Developed and deployed machine learning models using Python and Scikit-learn for predictive analytics, classification, pattern recognition, and anomaly detection.
- Built data preprocessing and feature engineering pipelines using statistical analysis, feature selection, and model evaluation techniques to improve model reliability and prediction performance.
- Applied time-series analysis and forecasting techniques to identify trends, temporal patterns, and anomalous behavior in large datasets.
- Developed a React.js and FastAPI-based analytics application integrating machine learning workflows, REST APIs, and data-driven decision-making systems.
- Conducted Exploratory Data Analysis (EDA) using Pandas, NumPy, Matplotlib, Seaborn, and Power BI to identify correlations, patterns, and anomalies.
- Worked with large datasets and analytical pipelines relevant to intelligent monitoring and anomaly detection systems.

Junior Data Scientist, AdvonCommerce - Columbus Ohio,USA

Feb 2025 – August 2025

- Implemented data clustering techniques using machine learning models to analyze e-commerce site data, improving customer segmentation and targeting strategies.
- Developed MLOps frameworks, including Docker.
- Led web scraping initiatives to extract valuable data from various online sources and performed A/B testing to optimize user experience and site performance.
- Designed and managed detailed reports and interactive visualizations to communicate key metrics and provide actionable insights, driving data-driven decision-making.

Analyst(Data Analyst), HCLTech – India

Aug 2020 – Dec 2022

- Gathered and analyzed large datasets for the library using Python ensuring data quality by cleaning and preparing datasets for analysis.
- Generated and maintained Excel-based reports using array formulas, pivot tables, and vlookup to enhance data accessibility and accuracy by 15 percent.
- Designed and managed comprehensive reports and visualizations using python and Tableau to present key metrics and actionable insights
- Successfully utilized Jira to track project tasks, manage workflows, and collaborate with cross-functional teams to ensure timely delivery of project milestones.
- Assisted in the development and validation of data integration processes including ETL processes, ensuring the integrity of data flows across multiple systems.
- Built and maintained regression and forecasting models to predict demand during peak seasons, leading to a 20percent reduction in operational costs.

Technologies

Statistics and ML: Predictive modeling, Forecasting, Time series analysis, A/B testing, ML Algorithms ,

Technologies: Python, Mysql, MongoDB ,Tableau ,Power BI

Project Management Tool : Microsoft Excel, Microsoft Office, Modeling tools, Written communication

Submitted Research Papaer to NAE-CON Edge-Enabled Intelligent Framework for Cyber Threat Classification and Adaptive Anomaly Mitigation

Projects

Novel Car Design Generation using Progressive Growing GAN

- Developed a generative deep learning system for image generation using Generative Adversarial Networks.
- Applied deep learning and computer vision techniques for learning complex visual patterns from image datasets.
- Explored neural network architectures and generative modeling techniques.

Retail Data Analysis

- Performed Data Cleaning on the data extracted for Amazon sales.
- Used different libraries like matplotlib,Seaborn to analyze the data and perform analysis on it.
- Analyzed the most frequent customers, customers who rarely buy stuff.
- Predicted future trends for the sales for the department.
- Tools Used:Python, Pandas,Numpy,Matplotlib,Scikit-learn,AWS

Education

University of Dayton, Master's in Computer Science

Jan 2023 – May 2024

- GPA: 3.9/4.0
- **Coursework:** Advance Programming and Data Structure Deep learning, Operating System , Data Science, Advanced Computer Vision, Algorithm Design
